| | | | Answer question No. 1 and any four from the rest. | | | | | | | | |
| 1,2 | Answer the following : (MCQ/ Fill in the blanks) (10×1) | | | | | | | | | | |
| (i) Plant use factor is the ratio of kWh generated to the product of plant capacity ar the for which the plant was in operation. | | | | | | | | | | | |
| (ii) The mounting used to discharge mud, scale or sediments from the boiler is | | | | | | | | | | | |
| | | (a) | Fusible Plug (b) Feed check valve | | | | | | | | |
| | | (c) | Blow off cock (d) Steam stop valve | | | | | | | | |
| | (iii) | Whi | th of the following is not a benefit of cogeneration | | | | | | | | |
| | | (a) | Increased efficiency of energy conversion and use | | | | | | | | |
| | | (b) | Reduced power factor | | | | | | | | |
| | | (c) | Reduced greenhouse emissions | | | | | | | | |
| | | (d) | None of the above | | | | | | | | |
| | (iv) | ch type of solar panel gives lowest efficiency? | | | | | | | | | |
| | | (a) | Mono crystalline (b) Polycrystalline silicon | | | | | | | | |
| | | (c) | Thin film (d) Polycrystalline germanium | | | | | | | | |
| | (v) | | ailable water head and discharge in a hydro power plant is 50 m and 100 m ³ /ectively. The generator efficiency is 0.85. The power developed by the plant i | | | | | | | | |

| (b) | (b) | Find the cost of generation per kWh for the plant of capacity 200 MW from the following data: | | | | | | | | |
| | | (i) | Capital cost Rs 20,000 per kW installed. | | | | | | | |
| | | (ii) | (ii) Interest and depreciation 10% on capital. | | | | | | | |
| | | (iii) Fuel consumption = 1.2 kg/kWh. | | | | | | | | |
| | | (iv) | Fuel cost Rs. 400 per ton | ne | | | | | | |
| | | (v) Salaries, wages, repair, and maintenance = Rs.150 × 106 | | | | | | | | |
| | | (vi) | Maximum demand = 120 | MW; loa | d factor 50% | (8) | | | | |

2.

- 3. (a) A hydro power station has a reservoir of 2 km² and of capacity 5 × 10⁶ m³. The net head of the water at the turbine is 50 m. If the efficiencies of the turbine and generator are 85% and 95% respectively calculate the total energy in kWh that can be generated from this station. If a load of 15000kW has been supplied for 4 hours, find the fall reservoir.
 - (b) How does a combined cycle power plant work? Discuss its environmental impact. (7)
- (a) Compare the working principle of a gas turbine power plant with the stem power plant.
 - (b) How does a cogeneration power plant produce heat and power? Discuss application and limitation of the cogeneration. (7)
- 5. (a) Calculate the amount of coal containing the same energy as in 1 kg of Natural Uranium. Also calculate the number of fissions per second to produce 1 kilo watt power. Where, Energy release from one fission of U²³⁵ = 200 MeV, Atoms in one-grain pure U²³⁶ = 25.64 × 10²⁰, Calorific value of coal 7800 kcal/kg, U²³⁶ content in Natural Uranium = 0.72%, Fission deficiency = 45 %, One Joule 0.239 cal. (10)
 - (b) Discuss how fast breeder reactors differ from regular nuclear power plant? (5)
- 6. (a) A wind mill is designed to generate an output of 1500 W at wind speed of 5m/s at 1 atm pressure and temperature of 25 °C. What will be the output the same wind null is installed on the top of the mill where the temperature is 10 °C, pressure is 0.85 atm. and wind speed is 6 m/s? (8)
 - (b) What are the thermoelectrical materials and how does a thermoelectric generator utilize the Seebeck Effect? (7)
- 7. Write short notes on: (any three)

BINA GHOWEHURY CEMTRAL LERARY (3 × 5 = 15)

IGMY & GIPS)

Azura, Hatkitownpore,

GENERAL -781017

- (a) Boiler mounting and accessories
- (b) Photovoltaic cell
- (c) Fluidized bed combustion
- (d) Fuel cell
- (e) Electrostatic Precipitators
